

# Realize full-season potential.

## DuPont™ V2™ Advantage

### COLUMBIA BASIN

DuPont™ V2™ Advantage is a full-season potato management program that combines DuPont™ Vydate® C-LV insecticide/nematicide and DuPont™ Vertisan™ fungicide for the ability to reduce or replace metam sodium. By promoting crop health to deliver more consistent yield and quality, V2™ Advantage helps you better manage your crop to meet your desired specifications.

#### Key benefits of DuPont™ V2™ Advantage:

##### Promotes consistent yield and quality

- V2™ Advantage increases tuber uniformity and internal quality as a result of excellent disease pest control. This promotes consistent yield, all with the absence or reduction of metam sodium.

##### Provides the ability to maintain better control of the crop

- V2™ Advantage also suppresses the early-die complex through its activity on Rhizoctonia canker and black scurf, early blight, brown spot, and black dot, and suppresses white mold and nematodes. In addition, it provides activity on some foliar pests, including aphids, Colorado potato beetle, and leafhoppers, as well as suppression of zebra chip<sup>1</sup> and purple top<sup>2</sup> disease (see 2ee Recommendations).

##### Promotes stronger more vigorous plants

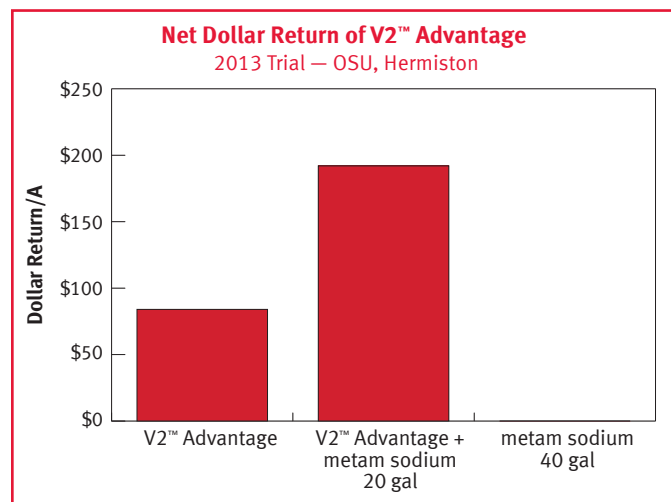

- With V2™ Advantage, crops stay healthier throughout the growing season.

V2™ Advantage      V2™ Advantage + metam sodium 20 gal      metam sodium 40 gal

- The combination of more vigorous vines and the suppression of early-die complex and other pests keeps growers in control of their crops throughout the entire season. This creates the opportunity for growers to better manage yield and quality to their specifications in a way that maximizes profit and return on investment.

Calculations are based on a \$6/cwt potato price and estimated grower standard program and input costs in the Columbia Basin.

## Potato Phenology DuPont™ V2™ Advantage applications

- **First application:** In-furrow Vydate® C-LV insecticide/nematicide (2.1 pt/A) plus Vertisan™ fungicide (16 fl oz/A).
- **Second application:** 45 days after planting, chemigate Vydate® C-LV (2.1 pt/A) insecticide/nematicide.
- **Third application:** 60 days after planting (at row closure): Chemigate Vydate® C-LV insecticide/nematicide (2.1 pt/A) plus Vertisan™ fungicide (16 fl oz/A).
- **Final applications:** Three to five applications of Vydate® C-LV should be made during bulking before harvest.
