Product Features

DuPont™ Cyrel® FAST Round FR 1450 is a sleeve making system that uses dry, thermal technology to process high quality photopolymer sleeves, thus eliminating all solvents and aqueous solutions from the plate room.

The Cyrel® FAST Round FR 1450 allows the production of 4–5 Cyrel® FAST round seamless photopolymer sleeves at a typical format of 57" x 39" (1,450 x 1,000 mm) in less than one hour, making it the ideal just-in-time sleeve making system for a market.

The Cyrel® FAST Round FR 1450 delivers outstanding sleeve quality and uniformity. This processor has the ability to produce a finished sleeve without solvent washout. The new round exposure equipment (Cyrel® FAST Round EX 1450 and LF 1450) for exposing and light-finishing sleeves is available to complement the Cyrel® FAST Round FR 1450 as an all-round system solution. As with all elements of the Cyrel® FAST round system, it is environmentally friendly with no solvents to handle, store or recycle and no drying equipment is required. In addition, the new design saves space and requires no expensive plate room construction.

The technology enhances the production of high quality sleeves quickly, by combining the efficiency and speed of digital sleeve imaging with the productivity and environmental benefits of dry, thermal sleeve processing.

The digital sleeves for DuPont's thermal sleeve making process are designed to meet the needs of high quality plates with fine halftone, line-work and solids.
