Assisted Positive Locking Junction Box

Application

First single lever self-locking electrical center. Developed by system supplier, Yazaki North America, for General Motors.

Unmet Need

Managing the ever-increasing electrical load on today's vehicles requires optimizing engine compartment packaging space while providing additional capacity within the electrical center.

Challenges

- Component must be able to withstand harsh under-the-hood operating conditions.
- Component must be easy to assemble in a quick and safe manner.

Solution

The unique Yazaki design:

- Provides a 10% reduction in footprint size, enabling more content or reduced engine compartment size.
- Enables an additional 8% spare electrical content.

- Reduces weight by 7% for greater fuel efficiency and lower shipping costs.
- Enables improved sealing to ensure that water, dust and other contaminants remain outside of the critical areas of the electrical center—even during shipping and handling.
- Is more ergonomically friendly to assemble, requiring less time and significantly less operator effort.

DuPont Material Chosen and Why

DuPont™ Zytel® glass-reinforced PA66 was chosen for this application due to its excellent balance of properties, specifically:

- Strength and stiffness
- Dimensional stability
- Resistance to elevated temperatures and chemicals found under the hood
- Ease of processing/good moldability
