

GOLD WINNER – 2015 DUPONT AWARDS FOR PACKAGING INNOVATION

Slider Technology Re-engineered to Keep Children Out of Easy-Open Packaging

Pactech Packaging; Reynolds Presto Products – USA

As demand for convenience increases, manufacturers must develop packaging solutions that provide both easy opening and restricted access as needed. With over 20 years of experience producing child-resistant flexible pouches, Pactech Packaging partnered with Presto Products to develop a slider-based closure that *has passed the testing requirements set forth in Title 16 CFR 1700 of the Poison Prevention Packaging Act (PPPA)*. This new technology will allow products that had been previously packaged in child-resistant boxes or bulky plastic containers to be packaged in flexible packaging.

Produced in a variety of sizes from 8.5" x 5" to 13.5" x 18" with and without a standup gusset, the size of the package is scalable to the size desired by the end user. This allows end users to keep a consistent look to their package while sizing it right for their products. Medi-CRREO™ Child Resistant Pouch offers increased graphic billboarding that cannot be seen on prescription bottles or rigid blister packaging. The Medi-CRREO™ with Child Guard™ closure also uses a high strength barrier material that is bite and tear proof.

Potential markets for the Medi-CRREO™ with Child Guard™ closure include food and consumer products as well as prescription medication, agricultural products, and household chemical products.

Honored for Excellence in Technological Advancement and Enhanced User Experience
