DuPont™ Zorvec™ Disease Control Receives Registration Approval from U.S. Environmental Protection Agency

WILMINGTON, Del., Sept. 2, 2015 – The U.S. Environmental Protection Agency (EPA) has granted registration approval for a new DuPont disease control active ingredient, oxathiapiprolin, which DuPont Crop Protection will market under the trademark Zorvec™. This regulatory milestone paves the way for registrations in other countries that will enable DuPont to bring this innovative new technology to growers around the world.

DuPont™ Zorvec™ is the first member of a new class of fungicides which represents a step change improvement in disease control for growers of potatoes, grapes, vegetables and other specialty crops.

“DuPont™ Zorvec™ has unique properties which will deliver visible results for growers. It will change everything about the way farmers view disease control,” said Rik Miller, president, DuPont Crop Protection. “Zorvec™ is another powerful tool from DuPont Crop Protection’s discovery pipeline that will help address the challenge of producing high-quality crops to feed a growing world population.”

DuPont™ Zorvec™ will offer an unmatched combination of consistency and control that will help growers improve yields, realizing better quality and improved productivity for a more successful crop.

Pending regulatory approval, DuPont Crop Protection plans on launching DuPont™ Zorvec™ disease control in several countries including Mexico, China, and Australia later this year.

Through a previous agreement, DuPont has granted a license to Syngenta to develop products containing DuPont’s fungicide oxathiapiprolin. Under the terms, Syngenta will receive exclusive rights for foliar and soil uses on all crops in the United States, Canada and Puerto Rico.

DuPont (NYSE: DD) has been bringing world-class science and engineering to the global marketplace in the form of innovative products, materials, and services since 1802. The company believes that by collaborating with customers, governments, NGOs, and thought leaders, we can help find solutions to such global challenges as providing enough healthy food for people everywhere, decreasing dependence on fossil fuels, and protecting life and the environment.
