

# CITY DEVELOPMENTS LIMITED

City Developments Limited (CDL), a global real estate operating company, has been recognized as a regional winner in the DuPont Safety and Sustainability Awards on the basis of the organization’s innovative approach to sustainability capacity building through the ‘Singapore Sustainability Academy’.

One of Singapore’s largest companies by market capitalization, CDL has a track record of over 50 years in real estate development, investment, and management. The company has a diversified portfolio spanning

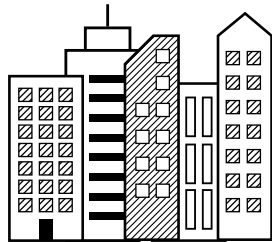

**97 LOCATIONS** in **26 COUNTRIES**

comprising residences, offices, hotels, serviced apartments, integrated developments, and shopping malls, which add up to over

**18 MILLION SQ FT**

of floor area globally.

With more than \$3.5 billion in funds under management, CDL is also leveraging its stable of prime assets to grow its real estate funds management business.

Since 1995, CDL has sought to integrate sustainability across its entire value chain. Building on this longstanding commitment, the company’s new sustainability blueprint, **CDL Future Value 2030** contains a set of clear targets, including doubling its resources devoted to:

sustainability advocacy

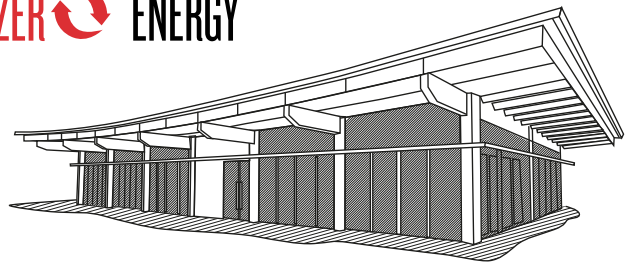

stakeholder engagement

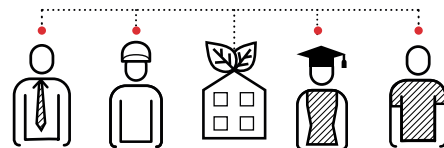

capacity building.

**ZER ENERGY**

Leveraging its expertise in stakeholder and community engagement and supporting the United Nations Sustainable Development Goal (SDG) 17, CDL has forged an extensive partnership involving 6 government agencies, 15 industry partners and the Sustainable Energy Association of Singapore (SEAS) to design and build the **zero-energy Singapore Sustainability Academy (SSA)**. It is a hub to bring government and business leaders, industry players, youths and the community together to share knowledge and collaborate for sustainable development.

Opened on World Environment Day 2017, the SSA is a custom-built zero-energy facility that demonstrates how sustainability concepts can be strategically integrated into the entire life-cycle of the development – from design, procurement, construction, and maintenance to user and community engagement.

Beyond the day-to-day training of sustainable energy professionals that is led by SEAS, CDL chairs a special programme committee involving key partners in the public, private, and non-profit sectors. It designs and implements programmes that are aligned with global and local climate actions, as well as emerging sustainability trends and best practices. Since its opening in June, the Academy has conducted many activities and initiatives in line with its mission.
