DuPont™ Aproach® Prima fungicide protects your cereal crop, even under heavy disease pressure, while providing visible foliar health benefits that keep leaves greener for improved grain quality and yield in the fall.

**Key benefits of Aproach® Prima**

- Contains two modes of action for better disease control of many hard-to-control diseases, including powdery mildew, rusts and septoria.
- Provides more complete coverage because it is rapidly absorbed and moves quickly into and within each plant. This helps compensate for less-than-ideal timing, since weather and other crop demands can make it difficult to perfectly plan fungicide applications.
- Protects your crop from inside and outside the plant, throughout the canopy and in wet weather — the only disease control technology today with these layers of coverage.

Because picoxystrobin and cyproconazole are highly systemic, both components are more active throughout the plant. This increases the effectiveness for management of resistance relative to premixes with less systemic activity. Both components are highly curative, which also helps with efficacy and resistance management (see below).

---

**FOUR MOVEMENT PROPERTIES** quickly surround, penetrate and protect leaves and stems

- **Translaminar Movement**: Moves through the leaf surface to protect top and bottom of the leaf.
- **Xylem Systemic Activity**: Moves through plant tissues to distribute throughout the leaf.
- **Local Gas Activity**: Gas-like protective barrier moves over the leaf surface.
- **Wax Diffusion Activity**: More consistent coverage across leaf and stem surface.

---

**PREVENTIVE, CURATIVE AND ERADICANT ACTIVITY**

- **PICOXYSTROBIN**
  - germination
  - growth of germ tube
  - penetration and parasitism
  - tissue colonization
  - sporulation

- **CYPROCONAZOLE**
  - more activity
  - less activity

---

**MODES OF ACTION** with Aproach® Prima effectively control all phases of the pathogen life cycle.
