

The miracles of science™

Control foxtails and fall panicum in seed corn, sweet corn and popcorn production

DuPont™ Accent® Q herbicide

DuPont™ Accent® Q herbicide, applied in seed corn, sweet corn or popcorn, delivers:

- Selective postemergence contact control of the toughest grass and broadleaf weeds.
- Flexibility to apply under more diverse weather conditions and across more seed corn in-breds, sweet corn hybrids and popcorn varieties with a wider range of adjuvants.

Rate recommendation

Accent® Q 0.7–0.9 oz/A (20–25 acres per bottle)

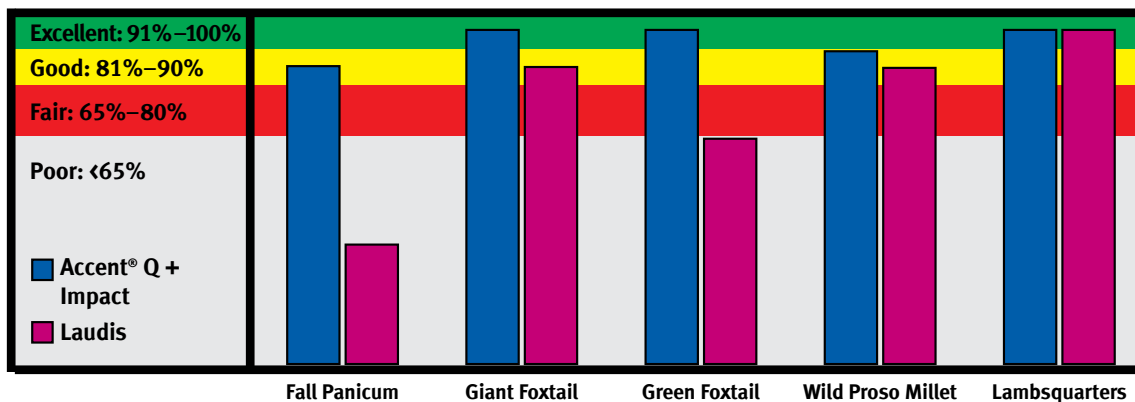

The addition of a non-ionic surfactant, crop oil concentrate or methylated seed oil, and ammonium nitrogen fertilizer is required. If another herbicide is tank mixed with Accent® Q, select adjuvants authorized for use with both products.

Application information

- Accent® Q is labeled for use in seed corn or popcorn less than 20 inches tall, or that exhibits up to and including 5-leaf collars (V5), whichever is most restrictive. Best results are obtained when applications are made early postemergence when corn is less than 12 inches tall and weeds are small.
- Accent® Q may be applied to certain sweet corn hybrids grown for fresh markets or under contract for processing. Applications of Accent® Q may be applied broadcast or with drop nozzles (post-directed) on sweet corn up to 12 inches tall or up to and including 5-leaf collars (V5). For sweet corn 12 to 18 inches tall, apply only with drop nozzles. Do not apply to sweet corn taller than 18 inches or those that exhibit 6 or more leaf collars (V6), and make only one application of Accent® Q per year.
- Accent® Q is rainfast in 1 hour.
- Use a minimum of 15 gallons of water for best performance.
