DuPont™ Aproach® fungicide is a broad-spectrum fungicide that will deliver more reliable results. It’s potential you can actually see, from a healthier-looking crop to higher yield potential at the end of the year.

**Key benefits of Aproach®**

- Provides more complete coverage because it is rapidly absorbed and moves quickly into and within each plant. This helps compensate for less-than-ideal timing, since weather and other crop demands can make it difficult to perfectly plan fungicide applications.
- Demonstrates the unique ability to redistribute within the crop canopy, increasing protection deeper into the crop canopy, closer to the soil surface where key diseases originate.
- Provides better control of and protection against yield-robbing diseases in corn, including anthracnose, rusts and leaf blights.

---

**FOUR MOVEMENT PROPERTIES** quickly surround, penetrate and protect leaves and stems

- **Translaminar Movement**: Moves through the leaf surface to protect top and bottom of the leaf.
- **Xylem Systemic Activity**: Moves through plant tissues to distribute throughout the leaf.
- **Local Gas Activity**: Gas-like protective barrier moves over the leaf surface.
- **Wax Diffusion Activity**: More consistent coverage across leaf and stem surface.
DuPont™ Aproach® fungicide program recommendations:

May Timing: V4 to V7
Aproach® 3.0–6.0 fl oz/A + herbicide

Late June–July Timing: VT to R2
Aproach® 6.0–12.0 fl oz/A +/- DuPont™ Prevathon® insect control*

Targeted diseases:
- Gray leaf spot
- Northern corn leaf blight
- Southern corn leaf blight
- Rust

* Prevathon® is not labeled for use on sweet corn.

Do not use adjuvants or crop oil with Aproach® on corn between V8 and VT stages.

The use of adjuvants or crop oil is allowed with DuPont™ Aproach® with all applications except on corn after the V8 stage and prior to the VT stage of corn growth. Make no more than 2 sequential applications of Aproach® before switching to a fungicide with a different mode of action. Minimum time between the last application and harvest (PHI) is 7 days for grain or ear and zero days for forage or grazing. Do not exceed 36 fluid ounces per acre per crop.
DuPont™ Aproach® Fungicide Demonstration of Improved Plant Growth and Health

All products were applied at 6 fluid ounces product per acre at 5 gallons per acre using a moving boom lab sprayer. Applied at the 2- to 3-leaf stage — at least two fully expanded leaves and the third leaf emerging to fully emerged from the whorl.

In greenhouse and field experience, Aproach® has been shown to improve total leaf area versus the untreated check, Quadris and Headline. Increased total leaf area increases the chlorophyll content of the plants, allowing plants the best opportunity to achieve maximum yield potential.
