

A photograph of a man and a young boy playing soccer in a grassy field. The man, wearing a white checkered shirt and blue jeans, is leaning forward, smiling, and looking at the boy. The boy, wearing a red jacket and blue jeans, is also smiling and looking at the soccer ball. A white soccer ball with colorful patterns is on the grass in front of them. The background is a dense green hedge.

**BE KEVLAR® READY.**

**Kevlar® XP™**

# NOW YOU CAN HELP REDUCE POTENTIALLY SERIOUS BALLISTIC AND TRAUMA INJURIES WITH NEW KEVLAR® XP™.

**A new way to help keep officers safe.** One of your men or women has just entered a dangerous situation. All you can think about is their safety. That's why you always make sure they are equipped with a vest. Now the latest innovation from DuPont can help keep them even safer—new Kevlar® XP™.

## Protection through and through.

When a bullet strikes a standard bullet-resistant vest, the resulting backface deformation could cause serious ballistic or trauma injuries. Kevlar® XP™ decreases the impact, reducing backface deformations by approximately 15% or more.\* It's also able to maintain its performance in extreme field conditions that officers face, including heat, humidity and mechanical wear. Tests show that Kevlar® XP™ typically stops bullets within the first three layers of a vest designed with a total of 11 layers. The remaining layers of Kevlar® XP™ absorb the energy of the bullet, resulting in less trauma to the vest wearer.

## More comfort in the field.

Situations can change drastically in a matter of seconds. Officers need to react on instinct. That's why we've made comfort a priority. Kevlar® XP™ features a patented new woven fabric technology that enables vests to weigh at least 10% less than those made with other commercially available technologies, while still being made of all Kevlar® material. Officers will have the freedom of movement they need to help protect themselves, their partners, and the public.

## Our legacy of protection.

Kevlar® has been used in ballistic applications for over 35 years. And we've been helping to protect those who protect us ever since. With state-of-the-art ballistics labs in Richmond, VA and Geneva, Switzerland, DuPont is always searching for new advances in personal protection technology.

### Backface Deformation of Kevlar® XP™ vs. Competitive Lightweight Technologies.

- Reduces backface deformation by approximately 15% or more
- Meets NIJ and other applicable global standards
- Makes vests at least 10% lighter
- Maintains performance after exposure to the elements
