Effects of Sterilization and 1- and 3-Year Real-Time Aging on Material Tensile Strength (MD) for 1073B

Transition Protocol material performance is equivalent to, or better than, current Tyvek®.
Effects of Sterilization and 1- and 3-Year Real-Time Aging on Material Tensile Strength (CD) for 1073B

Transition Protocol material performance is equivalent to, or better than, current Tyvek®.
Effects of Sterilization and 1- and 3-Year Real-Time Aging on Material Elongation (MD) for 1073B

Transition Protocol material performance is equivalent to, or better than, current Tyvek®.
Effects of Sterilization and 1- and 3-Year Real-Time Aging on Material Elongation (CD) for 1073B

Transition Protocol material performance is equivalent to, or better than, current Tyvek®.
Effects of Sterilization and 1- and 3-Year Real-Time Aging on Material Puncture Strength for 1073B

Transition Protocol material performance is equivalent to, or better than, current Tyvek®.
Transition Protocol material performance is equivalent to, or better than, current Tyvek®.
