DuPont™ Appeel® 55010

Appeel® resins Product Data Sheet

**Description**

**Product Description**
DuPont™ Appeel® 55010 is a modified polyolefin resin designed to function as a sealing layer for lidding applications, most commonly sealing to polypropylene. It is available in pellet form for use in conventional extrusion or coextrusion equipment designed to process polyethylene resins.

**Restrictions**

**Material Status**
Developmental: Active

**Availability**
- Asia, Australia, Pacific Rim

**Typical Characteristics**

**Uses**
- Lidding Sealant

**Applications**
- Appeel® 55010 has strong sealability to PP and allows a peelable seal from it.
- Boiling resistance. Appeel® 55010 endures boiling process.
- In the case of: OPET/ adh // Appeel® 55010 , these film structures endure boiling condition at 120°C / 30min
- Appeel® 55010 conforms to Code #20 of the Ministry of Health and Welfare Japan.

Typical structures for this lidding would be:
- OPET / adhesive // Appeel® 55010
- OPET / adhesive // coex film with Appeel® 55010

Appeel® 55010 is used as a heat seal layer in lidding material for injection molded and vacuum molded PP containers used in the packaging of puddings, jelly, and other food items.

**Typical Properties**

The performance of any sealant resin should be evaluated within the context of the application. The sealant is designed to bond to particular substrate(s). Many variables can affect seal strength, including the physical properties of the substrate being sealed to, thickness, flange or surface design, heat seal temperature, dwell time and pressure. The condition and type of the sealing equipment used, such as roller sealers versus platen seal mechanisms can make a significant difference.
In most cases sealant peel strength is used as a measure of performance. Although this is a convenient test, peel strength is affected not only by substrate adhesion but also by peel angle, separation rate, ambient temperature, tensile and modulus properties of the materials, and often by the time elapsed since the formation of the bond.

If sealant peel strength is used as a measure of sealant performance, it is imperative that peel strength be evaluated not only at the time of initial heat sealing the lid to the substrate, but throughout the life of the product and under all the conditions to which the sealant will be exposed. Only then does peel strength provide a reliable indication of adhesive performance in the specific application.

### Processing Information

**General**

- Maximum Processing Temperature: 285°C (545°F)

General Processing Information:

If the process is stopped for short periods of time, the screw for the Appeel® extruder should be kept turning at a low rpm to keep material flowing.

After processing Appeel®, purge the material out using a polyethylene resin, preferably with a lower melt flow rate than the Appeel® resin in use. The "Disco Purge Method" is suggested as the preferred purging method, as this method usually results in a more effective purging process. Information on the Disco Purge Method can be obtained via your DuPont Sales Representative.

Never shut down the extrusion system with Appeel® in the extruder and die. Properly purge out the Appeel® with a polyethylene, and shut down the line with polyethylene or polypropylene in the system.

**Blown Film Processing**

Blown Film Processing Information:

Blown Film: The melt temperature of Appeel® 55010 should be maintained in the 160 - 185°C range. Selection of a specific melt temperature will depend on screw configuration, potential power limitations, and the need to match melt viscosities. However, melt temperatures above 285°C should be avoided because of possible thermal degradation of the resin.

If the process is stopped for short periods of time, the Appeel® 55010 resin extruder should be kept turning at low rpm. For a permanent shutdown, the Appeel® 55010 resin should be purged out using an available polyethylene resin run at the same extrusion temperature used for the Appeel® 55010 resin. Never raise temperature over 285°C until Appeel® 55010 resin is completely purged out. Appeel® 55010 requires relatively low processing temperatures and cooling the bottom of hopper due to its low Vicat point and higher comonomer level.

Following is an example for suggested temperature profile on the low side of the processing range. Higher temperatures in the final metering zone, adapter and die are suggested if compatible with the process and application.

| Feed Zone   | 135°C (275°F) |
| Second Zone | 160°C (320°F) |
| Third Zone  | 160°C (320°F) |
| Fourth Zone | 160°C (320°F) |
| Fifth Zone  | 160°C (320°F) |
| Adapter Zone| 160°C (320°F) |
| Die Zone    | 160°C (320°F) |

**Cast Film / Sheet Processing**

Cast Film: The melt temperature of Appeel® 55010 should be maintained in the 210 - 235°C range. Selection of a specific melt temperature will depend on screw configuration, potential power limitations, and the need to match melt viscosities. However, melt temperatures above 285°C should be avoided because of possible thermal degradation of the resin.

If the process is stopped for short periods of time, the Appeel® 55010 resin extruder...
should be kept turning at low rpm. For a permanent shutdown, the Appeel® 55010 resin should be purged out using an available polyethylene resin run at the same extrusion temperature used for the Appeel® 55010 resin. Never raise temperature over 285ºC until Appeel® 55010 resin is completely purged out. Appeel® 55010 requires relatively low processing temperatures and cooling the bottom of hopper due to its low Vicat point and higher comonomer level.

Following is an example for suggested temperature profile on the high side of the processing range. Lower temperatures in the final metering zone, adapter and die are suggested if compatible with the process and application.

| Feed Zone | 160°C (320°F) |
| Second Zone | 185°C (365°F) |
| Third Zone | 210°C (410°F) |
| Fourth Zone | 235°C (455°F) |
| Fifth Zone | 235°C (455°F) |
| Adapter Zone | 235°C (455°F) |
| Die Zone | 235°C (455°F) |

**FDA Status Information**

Appeel® 55010 Lidding Sealant Resin complies with Food and Drug Administration Regulation 21 CFR 177.1520(c)3.2a subject to extractive limitations of 177.1330(c).

The information and certifications provided herein are based on data we believe to be reliable, to the best of our knowledge. The information and certifications apply only to the specific material designated herein as sold by DuPont and do not apply to use in any process or in combination with any other material. They are provided at the request of and without charge to our customers. Accordingly, DuPont cannot guarantee or warrant such certifications or information and assumes no liability for their use.

**Regulatory Information**

Appeel® 55010 complies with Japan Hygienic Olefin and Styrene Plastics Association and MITI no. 20 Food regulation in Japan.

For information on regulatory compliance outside of the U.S., consult your local DuPont representative.

**Safety & Handling**

For information on appropriate Handling & Storage of this polymeric resin, please refer to the Material Safety Data Sheet.

A Product Safety Bulletin, Material Safety Data Sheet, and/or more detailed information on extrusion processing and/or compounding of this polymeric resin for specific applications are available from your DuPont Packaging and Industrial Polymers representative.

**Read and Understand the Material Safety Data Sheet (MSDS) before using this product**

**Regional Centres**

DuPont operates in more than 70 countries. For help finding a local representative, please contact one of the following regional customer contact centers:
