**Elvaloy® resins Product Data Sheet**

### Description

**Product Description**
Elvaloy® PTW is an ethylene terpolymer, used as an Impact Modifier for a variety of polymers.

### Restrictions

**Material Status**
Commercial: Active

### Typical Characteristics

**Uses**
Polymer Modifier

**Characteristics / Benefits**
General purpose toughener for a variety of polymers. Promotes toughening of PET.

**Applications**
When used in a CPET tray formulation, Elvaloy® PTW provides both toughening and increases the melt strength of the PET.

### Typical Properties

#### Physical

</tbody>
</table>

### Processing Information

**Optimizing Use Level:**
This material is an ethylene terpolymer that is most effective when it is well dispersed into a polymer. The single screw or twin-screw extrusion equipment used to melt and pump the molten polymer provides the dispersive mixing. Increasing the loading of the ethylene terpolymer in the polymer makes it more difficult to develop the required degree of dispersion. The best improvement in cold temperature impact resistance may occur at an intermediate loading in the case where the extrusion equipment has limited mixing capabilities. On single screw extruders, increasing the screw speed has been found to improve the quality of the dispersion and observed tray toughness.

**Handling/Storage of Concentrate:**
Elvaloy® PTW is supplied in polyethylene bag lined boxes or bags. The product does not require drying but the material should be handled in a way that minimizes moisture pick-up. For example reseal bags or boxliners when partial bags or boxes are not being used.

**Feeding Extruder:**
The melting point of the Elvaloy® PTW is 72°C (162°F) so a split feed single screw extrusion feed hopper will be required in cases where the temperature of a hot dried polymer such as PET exceeds the melting point of the Elvaloy® PTW.

### FDA Status Information

DuPont™ ELVALOY® PTW Resin Modifier may be used at up to a level of 7 percent in crystallized polyethylene terephthalate (CPET) trays that will hold food for microwave and conventional oven heating. Such use may be properly said to comply fully with the Federal Food, Drug, and Cosmetic Act and all applicable food additive regulations.

DuPont™ ELVALOY® PTW Resin Modifier may be used at up to a level of 3 percent in amorphous polyethylene terephthalate (APET) trays that will hold food under Conditions of Use E and F (room temperature and refrigerated storage with no thermal treatment in the container). Such use may be properly said to comply fully with the Federal Food, Drug, and Cosmetic Act and all applicable food additive regulations.
The information and certifications provided herein are based on data we believe to be reliable, to the best of our knowledge. The information and certifications apply only to the specific material designated herein as sold by DuPont and do not apply to use in any process or in combination with any other material. They are provided at the request of and without charge to our customers. Accordingly, DuPont cannot guarantee or warrant such certifications or information and assumes no liability for their use.

Regulatory Information

For information on regulatory compliance outside of the U.S., consult your local DuPont representative.

Articles made with PET or other thermoplastics modified with small amounts of Elvaloy® PTW should be tested to confirm they comply with applicable food contact regulations in your region.

Safety & Handling

For information on appropriate Handling & Storage of this polymeric resin, please refer to the material Safety Data Sheet.

Regional Centres

DuPont operates in more than 70 countries.

For help finding a local representative, please contact one of the following regional customer contact centers:
