Elvax® resins Product Data Sheet

**Description**

**Product Description**
DuPont™ Elvax® 4320 is an ethylene-vinyl acetate / acid terpolymer resin for use in industrial applications.

---

**Restrictions**

**Material Status**
- Commercial: Active

**Availability**
- Globally

---

**Typical Characteristics**

**Composition**
- 25 % By Weight Vinyl Acetate comonomer content
- 1 wt% Methacrylic Acid
- Thermal Stabilizer: BHT antioxidant

**Characteristics / Benefits**
Intermediate molecular weight resin higher in viscosity than Elvax®4310 and intermediate in performance between Elvax®4310 and 4355. Can be combined (as can Elvax®4310) with Elvax®4355 or 4260 to optimize performance at a desired viscosity level.

**Applications**
Elvax® resins can be used in a variety of applications involving molding, compounding, extrusion, adhesives, sealants, and wax blends. For additional information and properties associated with specific applications, please refer to the Grade Selector Guides found on the Elvax® website for industrial applications. **Processing Information**

**General**
- Maximum Processing Temperature: 230°C (446°F)

**General Processing Information**
Elvax® resins can be processed by conventional thermoplastic processing techniques, including injection molding, structural foam molding, sheet and shape extrusion, blow molding and wire coating. They can also be processed using conventional rubber processing techniques such as Banbury, two-roll milling and compression molding.
Elvax can be used in conventional extrusion equipment designed to process polyethylene resins. However, corrosion-protected barrels, screws, adapters, and dies are recommended, since, at sustained melt temperatures above 446°F (230°C), ethylene vinyl acetate (EVA) resins may thermally degrade and release corrosive by-products.
