DuPont Packaging & Industrial Polymers

DuPont™ HPF AD1035

DuPont™ HPF resins Product Data Sheet

Description

Product Description
DuPont™ HPF AD1035 is an ionomer of ethylene acid acrylate terpolymer. This polymeric material can be processed in conventional extrusion and injection equipment designed to process polyethylene and ethylene copolymer type resins, to create various shapes and sheeting.

Restrictions

Material Status
Developmental: Active

Typical Characteristics

Composition
Magnesium Ionomer

Features
DuPont™ HPF AD1035 is the next generation of the DuPont™ HPF family, offering high COR and lower compression. This combination of properties makes it extremely versatile and possible for this polymer to be used as a core, mantle, or cover in a golf ball construction. DuPont™ HPF AD1035 is based on a new technology platform. DuPont™ HPF AD1035 offers a combination of high resilience and low compression never before available. This polymer is a highly amorphous material.

Characteristics / Benefits
- Shore Hardness (D Scale) ASTM D2240D 35
- Flex Modulus ASTM D790 50.3 MPa
- Tensile Strength ASTM D638 10.7 MPa
- Elongation % ASTM D638 170
- Coefficient of Restitution (COR) ADC 818
- Compression ADC 116
- Compression ATTI 51.3

Applications
Golf Ball construction.

Processing Information

General
General Processing Information

This material is readily processible in conventional molding equipment. Typical melt temperatures for injection molding are 410°F (210°C) to 500°F (260°C). Actual processing temperatures will usually be determined by either the specific equipment or other polymers in a blend or coextrusion.

Drying

DuPont™ HPF AD1035 is shipped dry, (<1000 ppm moisture), in moisture-resistant bags or in moisture-resistant liners in boxes, and can be used as received. However, DuPont™ HPF AD1035 does absorb moisture from the air, and should be kept sealed in a moisture-resistant container whenever possible. DuPont™ HPF AD1035 may be dried using regenerative-type desiccant bed dryers capable of producing dry air with a dew point of -20 to -40ºC (-4 to -40ºF). Typical drying conditions for this magnesium ionomer grade are 24 hours at a temperature below 50ºC (122ºF). If moisture levels have reached greater than 2000 ppm, it may be necessary to employ vacuum as well as heat to remove moisture.

Materials of construction used in the processing of this resin preferentially should be corrosion resistant. Stainless steels of the types 316, 15-5PH, and 17-4PH are excellent, as is quality chrome or nickel plating, and in particular duplex chrome plating. Type 410 stainless steel is satisfactory, but needs to be tempered at a minimum temperature of 600ºC (1112ºF) to avoid hydrogen-assisted stress corrosion cracking. Alloy steels such as 4140 are borderline in performance. Carbon steels are not satisfactory. While stainless steels can provide adequate corrosion protection, in some cases severe purging difficulties have been encountered. Nickel plating has been satisfactory, but experiments have shown that chrome surfaces have the least adhesion to acid based polymers. In recent years, the quality of chrome plating has been deteriorating due to environmental pressures, and the corrosion protection has not always been adequate. Chrome over top of stainless steel seems to provide the best combination for corrosion protection and ease of purging.

After processing DuPont™ HPF AD1035, purge the material out using a polyethylene resin, preferably with a lower melt flow rate than the DuPont™ HPF resin in use. The "Disco Purge Method" is suggested as the preferred purging method, as this method usually results in a more effective purging process. Information on the Disco Purge Method can be obtained via your DuPont Sales Representative.

Never shut down the extrusion system with DuPont™ HPF resin in the extruder and die. Properly purge out the DuPont™ HPF with a polyethylene, and shut down the line with polyethylene or polypropylene in the system.

Read and Understand the Material Safety Data Sheet (MSDS) before using this product

Regional Centres

DuPont operates in more than 70 countries. For help finding a local representative, please contact one of the following regional customer contact centers:
