

2(ee) Recommendation

Use information in accordance with Section 2(ee) of FIFRA

DUPONT™ UPBEET® HERBICIDE

EPA REG. NO. 352-569

UPBEET® PLUS GLYPHOSATE OR UPBEET® PLUS GLYPHOSATE PLUS CLOPYRALID FOR IMPROVED WEED CONTROL IN ROUNDUP READY SUGAR BEETS FOR USE IN COLORADO, IDAHO, NORTH DAKOTA, NEBRASKA, MICHIGAN, MINNESOTA, MONTANA, SOUTH DAKOTA AND WYOMING

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Always read this FIFRA 2(ee) bulletin and the entire label on the product containers before using this product. DuPont will not be responsible for losses or damages resulting from the use of this product in any manner not specifically instructed by DuPont. User assumes all risks associated with uses not specified by the label of DuPont 2(ee) instructions.

Read and follow all applicable directions, restrictions and precautions on the EPA-registered label for each product.

UPBEET® plus Glyphosate or UPBEET® plus Glyphosate plus Clopyralid

A tank mixture of UPBEET® at 1.0 ounce per acre plus glyphosate may be applied as a postemergence treatment in Roundup Ready sugar beets. The addition of UPBEET® to clopyralid at 1.3 to 2.0 ounces per acre plus a glyphosate only program can provide improved control of wild buckwheat, common lambsquarters, common mallow, common ragweed, redroot pigweed, velvetleaf, volunteer Roundup Ready canola and volunteer Roundup Ready soybean. For best control of these species, make two applications of this tank mix treatment beginning when weeds are small. Applications can be applied beginning at the cotyledon sugar beet stage, with the second application applied 10 to 14 days later depending on weed size.

The addition of an adjuvant such as an MSO based high surfactant oil concentrate (HSMOC) adjuvant is recommended (such as "Destiny" HC, "Savy" and others) and should be added at 1.0 pint per acre to UPBEET® plus glyphosate tank mixes (including clopyralid at up to 2.0 oz/acre).

Ammonium sulfate (AMS) should also be added to this tank mix if it is recommended on the glyphosate label. See glyphosate label for specific AMS recommendations.

Refer to the glyphosate label for further application information and use restrictions. Follow the label guidelines that are the most restrictive.

Do not apply more than 2.5 ounces of UPBEET® per acre per season. Apply UPBEET® no later than 60 days before harvest.

Mixing Instructions

1. Fill the tank 1/4 to 1/3 full of water.
2. Add UPBEET® with the agitator running. Continue agitation until UPBEET® is fully dispersed, at least 5 minutes. UPBEET® should be thoroughly mixed with water before adding any other material.
3. As the tank is filling, add glyphosate and clopyralid. If needed, add AMS next and then adjuvant last.
4. Triple rinse all empty containers and add rinsate to the spray tank
5. If the mixture is not continuously agitated, settling will occur. If settling occurs, thoroughly re-suspend the mixture by running the agitation system at full flow for at least five minutes before spraying.
6. If UPBEET® and glyphosate or UPBEET® and glyphosate and clopyralid are to be applied in multiple loads, pre-slurry UPBEET® in clean water prior to adding to the tank. This will prevent the tank mix partner from interfering with the dispersion of UPBEET®.
