DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product. For any requirements specific to your State or Tribe; consult the agency responsible for pesticide regulation. Do not apply this product in any way that will contact workers or other persons; either directly or through drift. Only protected handlers may be in the area during application.

DuPont™ A VAUNT® insecticide is recommended for the control of Light Brown Apple Moth (Epiphyas postvittana) in Grapes, Pome Fruit and Stone Fruits.

Apply DuPont A VAUNT® Insecticide at 5.0 to 6.0 ounces per acre as a foliar spray using properly calibrated ground spray equipment. Make the first application at initiation of egg hatch, at appearance of small larvae or at first signs of infestation for each generation. Use the higher application rate for moderate to heavy insect pressure. Make application before pests reach damaging levels. Monitor fields and make an additional application if populations rebuild to potentially damaging levels. Apply in sufficient water to obtain thorough and uniform cover of foliage. Consult your state cooperative extension service, professional consultants or other qualified authorities to determine appropriate action threshold levels for this pest.

For best results, use an adjuvant to help increase coverage, penetration and thus performance.

Refer to product label for DuPont A VAUNT® insecticide for additional general information and Precautions for each crop listed on this recommendation.

DuPont will not be responsible for losses or damages resulting from the use of this product in any manner not specifically instructed by DuPont. User assumes all risks associated with uses not specified by the label or DuPont 2(ee) instructions.

Restrictions

Grapes:

Make no more than 2 applications per season
Do Not apply more than 12 oz A VAUNT® or 0.22 lb ai of indoxacarb containing products per acre per year.
Minimum interval between sprays is 21 days.
The field re-entry interval (REI) is 12 hours.
Preharvest interval (PHI): Do not apply within 7 days of harvest.
Pome fruits (including Pear) and Stone fruits:
Make no more than 3 applications prior to hand-thinning. No hand-thinning after the 4th application.
Make no more than 4 applications per season.
Do Not apply more than 24 oz AVAUNT® or 0.44 lb ai of indoxacarb containing products per acre per year.
Do not apply dilute applications of more than 200 gal water per acre.
Minimum interval between treatments is 7 days.
The field re-entry interval (REI) is 12 hours.

Preharvest interval (PHI) for Pear, Pome and Stone Fruits:
Pome fruits (except Pears) and Stone fruits: Do not apply within 14 days of harvest.
Pears: Do not apply within 28 days of harvest.
