DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product. For any requirements specific to your State or Tribe; consult the agency responsible for pesticide regulation. Do not apply this product in any way that will contact workers or other persons; either directly or through drift. Only protected handlers may be in the area during application.

DuPont™ Coragen® insect control must be used only in accordance with directions on this bulletin or in separately published DuPont labeling.

DuPont™ Coragen® insect control is recommended for the control of beet armyworm and cabbage looper via drip chemigation in globe artichoke.

Read the chemigation section of the federal label for more information on how to use via drip chemigation.

DuPont will not be responsible for losses or damages resulting from the use of this product in any manner not specifically instructed by DuPont. User assumes all risks associated with uses not specified by the label or DuPont 2(ee) instructions.

USE RESTRICTIONS
Begin drip application when populations first appear. CORAGEN® must be applied uniformly in the root zone or poor performance will result.

Drip tape must be placed directly underneath a single row to ensure CORAGEN® is applied in the root zone.

During the first half of the crop growing cycle, allow 1-3 days for CORAGEN® to be translocated into the aerial portions and to fully protect. For applications made in the second half of the crop growing cycle: translocation of CORAGEN® into aerial portions of the plant may take up to 7-10 days.

Do not make more than 2 drip chemigation applications of CORAGEN® per crop.

Minimum application interval between drip chemigation treatments is 14 days.

Apply no more than 15.4 fl oz CORAGEN® or 0.2 lb a.i. of chlorantraniliprole containing products per acre per calendar year.
