Introducing STYROFOAM™ Solutions for flooring and cellars: performance, product overview and references
**Introduction**

In the demanding conditions of today's building and engineering projects STYROFOAM™ blue extruded foamed polystyrene boards can deliver the thermal performance and strength you require - for the lifetime of the structure.

As a world-class producer of thermal insulation products, Dow Building Solutions can provide help, advice and information in order to help you achieve the solutions you're looking for.

STYROFOAM™ Solutions are available in a number of different grades which are designed to meet the performance requirements of specific applications. For construction applications they are marketed under the brands FLOORMATE™ (for flooring), ROOFMATE™ (for roofing) and PERIMATE™ (for below ground and basement applications).

**About STYROFOAM**

STYROFOAM™ has been manufactured by Dow since the 1940s. The process of extruding foamed polystyrene results in a material with uniformly small, closed cells, a smooth 'skin' and an unrivalled set of properties which make it the choice of specifiers in a wide range of demanding insulation applications:

- **low thermal conductivity** - minimising the board thickness needed to achieve a specific U-value, thus allowing the designer greater flexibility
- **high compressive strength** - in load-bearing applications, the closed cell structure gives the foam great rigidity and makes it highly resistant to compression
- **low water absorption** - STYROFOAM™ has natural resistance to rain, snow, frost and water vapour which makes it an exceptionally stable material, which retains its initial insulation performance and physical integrity in exposed conditions over the very long term.

It was this unusual property that made the inverted warm flat roof concept possible, an idea pioneered by Dow

- **user-friendliness** - STYROFOAM™ is easily worked with normal hand tools
- **hygiene** - STYROFOAM™ boards have low susceptibility to rot, meaning mould or fungal growth is minimised. They are clean, odourless and free from irritating dust.
Developing your STYROFOAM Solution

Each construction project has its own unique combination of insulation requirements, and developing an insulation project specification can be a time consuming process. However, the designer now has available a range of options in the form of STYROFOAM™ Solutions, as well guidance for using STYROFOAM™ to maximum effect in a wide selection of typical application areas. You will find each STYROFOAM™ Solution detailed in a series of guides available from Dow Building Solutions. These can be found on our website at www.styrofoam.co.uk, by calling 020 3139 4190 or by emailing dbsuk@dow.com.

Authority

STYROFOAM™ is manufactured under the BS EN ISO 9001: 2008 Quality Management System (BSI certificate Q05968). Dow also operates an Environmental Management System which has accomplished ISO 14001:2004 (BSI Certificate EMS 547690).

STYROFOAM™ products comply with BS EN 13164: 2012 Thermal insulation products for buildings - factory made products of extruded polystyrene (XPS) - specification.

Meeting environmental standards

Concern about ozone depletion in the stratosphere has led to international agreements to phase out the use of ozone depleting chemicals. All STYROFOAM™ products are hydrochlorofluorocarbon (HCFC) free and comply with the requirements of EC Regulation No 2037/2000 (1 October 2000) on substances which deplete the ozone layer.

STYROFOAM™-A products use carbon dioxide as the main blowing agent - the Ozone Depletion Potential (ODP) is zero and the Global Warming Potential (GWP) is less than five.
Characteristics and performance

Surface characteristics
Dow STYROFOAM™ boards are blue. All boards have a smooth homogeneous skin on both sides with the exception of XENERGY™ LG and PERIMATE™ DIA.

Structural
STYROFOAM™ boards are available in a range of compressive strengths to suit different load bearing requirements.

Fire
Information on aspects of fire performance of extruded polystyrene in building applications is given in BS 6203: 2003, ‘Guide to fire characteristics and fire performance of expanded polystyrene materials (EPS and XPS) used in building applications’.

STYROFOAM™ products contain a flame retardant additive to inhibit accidental ignition from a small fire source. STYROFOAM™ is, however, combustible and if exposed to an intensive fire may burn rapidly. During shipment, storage, installation and use STYROFOAM™ products should not be exposed to flames or other ignition sources.

Fire classification is based on small scale tests, which may not reflect the reaction of the product in its end use state under actual fire conditions. STYROFOAM™ products should, when installed, be adequately protected from direct exposure to fire. STYROFOAM™ products achieve Euroclass E (reaction to fire).

Temperature
Polystyrene products will melt when brought into direct contact with high temperature heat sources: for STYROFOAM™ boards the recommended maximum continuous working temperature is 75°C.

Water/moisture
STYROFOAM™ is:
- highly resistant to water absorption
- very resistant to the passage of water vapour
- highly resistant to repeated freeze/thaw cycles.

Biological
STYROFOAM™ has a low susceptibility to rot, and mould or fungal growth is therefore minimised.

Chemical
STYROFOAM™ boards are compatible with most commonly occurring construction materials such as lime, cement, plaster, anhydrous gypsum, solvent-free bituminous compounds, water-based wood preservatives, as well as alcohols, acids and alkalis.

Certain organic materials such as solvent-based wood preservatives, coal tar and derivatives (creosote), paint thinners and common solvents (e.g. acetone, ethyl acetate, petrol, toluene and white spirit) will attack STYROFOAM™, resulting in softening, shrinkage and possible dissolution, with a consequent loss of performance.

The use of solvent-free adhesives is advised. Compatibility with STYROFOAM™ should be checked with the adhesive suppliers.

Sunlight
Protect STYROFOAM™ from prolonged exposure to sunlight to prevent degradation of the surface of the board.

Durability
Properly installed, STYROFOAM™ boards have a service life comparable with that of the building or structure.

Environmental
STYROFOAM™ is non bio-degradable and does not present an environmental hazard.

Disposal
Where circumstances allow STYROFOAM™ can be:
- recycled
- disposed of as landfill
- incinerated to recover the energy content.
Product overview

FLOORMATE™-A
FLOORMATE™-A is the STYROFOAM™ Solution for insulating floors, and is currently available in three grades, FLOORMATE™ 300-A, 500-A and 700-A. FLOORMATE™-A insulation is available in a range of compressive strengths to match the loading requirements of individual projects.

FLOORMATE™-A insulation can be installed under or over the slab in ground bearing concrete floors and is suitable for use with suspended beam and block and timber floors.

PERIMATE™ DI-A
PERIMATE™ DI-A is the STYROFOAM™ Solution for insulating structures below ground. PERIMATE™ DI-A boards have vertical channels cut into one face, to drain water away, with a filter fabric bonded to the face to prevent soil particles blocking the channels.

Recommendations

XENERGY™ products contain a flame retardant additive to inhibit accidental ignition from a small fire source. XENERGY™ is however, combustible and if exposed to an intensive fire may burn rapidly.

During shipment, storage, installation and use, XENERGY™ products should not be exposed to flames or other ignition sources. Fire classification is based on small scale tests, which may not reflect the reaction of the products in its end use state under actual fire conditions. XENERGY™ products should, when installed, be adequately protected from direct exposure to fire.

Recommendations about the methods, use of materials and construction details are given as a service to designers and contractors. These are based on the experience of Dow with the use of XENERGY™ products. Any drawings offered by Dow are meant only to illustrate various possible applications and should not be taken as a basis for design. Since Dow is a materials supplier and exercises no control over the installation of XENERGY™ products, no responsibility is accepted for such drawings and recommendations.

In particular, no responsibility is accepted by Dow for the systems in which XENERGY™ products are used or the method of application by which they are installed. The legal obligations of Dow in respect of any sale of XENERGY™ products shall be determined solely by the terms of the respective sales contract.

Visit www.dowxenergy.co.uk for further information on XENERGY™ SL insulation products as well as adhesives and sealants from Dow Building Solutions.
