Introducing the IntegraFlux™ UXA-2680XP Ultrafiltration Module

Operates with 40% LOWER TMP, 15% LESS ENERGY, 60% LESS CHEMICALS and 35% LESS WASTEWATER, in the SAME SHAPE and SIZE as the microfiltration module you have been using.

A BETTER CHOICE.

Switch your 50-m² microfiltration module for the IntegraFlux™ UXA-2680XP Ultrafiltration Module for substantially improved performance. Boost productivity and lower your CAPEX. Boost efficiency and lower your OPEX. Whatever your industry and business environment, the IntegraFlux™ module will help improve your operation and lower the cost of water. Simply a better choice.

Upgrade your industrial water plants.

- Extreme-permeability XP Fiber delivers groundbreaking high-flux, low-energy performance.
- Innovative UF technology and module design makes switching modules easy. No hardware or process changes needed to switch from your MF module.

15% lower energy costs.

With IntegraFlux™ modules you can operate your system at lower inlet pressure, reducing energy costs and chemical consumption.

Easy cleaning. Less fouling.

IntegraFlux UF modules have much smaller pores than microfiltration modules, so solids don’t penetrate the surface: Easier to clean with less fouling between backwashes.
