

Tedlar®

Sailfish Point Roof Project

Sailfish Point, Florida, is a small island near Port St. Lucie and West Palm Beach; it is surrounded by beautiful blue skies and pure saltwater. Homeowners located there were looking to replace their roof that had been installed approximately 20 years ago and asked Total Roofing Systems to help them.

The previous roof used a stone coated steel panel system. When the stone coat gets worn down with this type of system, the underlying steel gets exposed and begins to rust. Given the harsh saltwater environment, the roof had reached its limit and the homeowners were looking for a longer-term solution.

After reviewing competitive bids, Total Roofing Systems ultimately advised the homeowners to select Tedlar® laminated on aluminum for a variety of reasons, but primarily because Tedlar® has no coastal restrictions due to its extreme chemical and corrosion resistance. Additionally, they were impressed by the over 60 years of real-world data showing that Tedlar® maintains its initial appearance in the harshest of environments, including coastal settings.

The homeowners are very pleased with their decision to use Tedlar® to protect their beautiful home, and know that they have made a sound investment that will last for years to come.

Highlights

Location:

Florida, US

Products:

Blue Tedlar® on Aluminum

Partner:

Total Roofing Systems, Metal Alliance
