3. PRODUCT DESCRIPTION
Basic Use
WEATHERMATE™ Flexible Flashing is a self-adhering fully adhered flashing that conforms to curved surfaces to provide a tear resistant seal that resists water intrusion around windows and doors. It is part of the complete WEATHERMATE™ Weather Barrier Solutions lineup from Dow – products designed to enhance the performance of the building envelope.

WEATHERMATE™ Flexible Flashing combines a white creped high-density polyethylene (HDPE) film facer with a butyl rubber adhesive that forms a strong mechanical and chemical bond to most building materials. A polymeric-coated kraft paper release liner provides a more consistent peel than plain paper liners.

WEATHERMATE™ Flexible Flashing contains no asphalt. The butyl rubber adhesive technology, a key component of this flashing, is considered superior to asphalt adhesives in compatibility with commonly used building envelope caulking materials, insulated and uninsulated sheathings, housewraps and window casing materials.

Sizes
WEATHERMATE™ Flexible Flashing is available in 100' (30.5 m) rolls in widths of 4", 6", 9" and 18".

Limitations
Minimum application temperature: 40°F (4.4°C). WEATHERMATE™ Flexible Flashing may be left exposed to sunlight up to 120 days.

4. TECHNICAL DATA

Applicable Standards
WEATHERMATE™ Flexible Flashing meets the requirements of AAMA 711 Voluntary Specification for Self-Adhering Flashing Used for Installation of Exterior Wall Fenestration Products. Application standards include:
• ASTM D5034 Standard Test Method for Breaking Strength and Elongation of Textile Fabrics (Grab Test)
• ASTM D3330 Standard Test Method for Peel Adhesion of Pressure-Sensitive Tape
• ASTM D1970 Standard Specification for Self-adhering Polymer Modified Bituminous Sheet Materials used as Steep Roofing Underlaymen for Ice Dam Protection
• ASTM G154 Standard Practice for Operating Fluorescent Ultraviolet (UV) Lamp Apparatus for Exposure of Nonmetallic Materials

Physical Properties
WEATHERMATE™ Flexible Flashing exhibits the typical properties and characteristics indicated in Table 1 when tested as represented.

5. INSTALLATION
Preparation
For best adhesion performance, apply WEATHERMATE™ Flexible Flashing at air and surface temperatures of 40°F (4.4°C) or above. A spray adhesive such as 3M High Strength 90 is recommended if applying WEATHERMATE™ Flexible Flashing directly to OSB or other surfaces where additional adhesion may be required.

Application
Cut flashing strips into easily handled lengths. Peel white plastic release film from the adhesive, position against substrate and without wrinkling or stretching, press firmly into place with a hand roller or smoothing tool. It is important to apply pressure to ensure strong long term bond to the substrate. Do not stretch flashing or force changes in the directional line of application as this can cause wrinkling and channels that prevent a smooth tight seal to the substrate. Once an adhesive bond has been established, it may be difficult to reposition the flashing without affecting sealing and adhesion capability.

6. AVAILABILITY
WEATHERMATE™ Flexible Flashing is distributed through an extensive network. For more information, call:
1-800-232-2436 (English)
1-800-565-1255

7. WARRANTY
Not applicable.

8. MAINTENANCE
Not applicable.

9. TECHNICAL SERVICES
Dow can provide technical information to help address questions when using WEATHERMATE™ Flexible Flashing. For technical assistance, call:
1-866-583-BLUE (2583) (English)
1-800-363-6210 (French)
