Installation Procedures for Exposed Basement Applications

Using DuPont™ Thermax™ Brand Insulations

SYSTEM OVERVIEW

General Information
Thermax™ Sheathing, Thermax™ Basic NH, Thermax White Finish, and Thermax™ White Finish NH offer quick and easy options to insulate basement walls. Lightweight and easy to install, products are ideally suited for exposed basement applications, whether the desired result is a semi-finished or finished appearance.

Thermax™ Sheathing, Thermax™ Basic NH, Thermax White Finish, and Thermax™ White Finish NH are nonstructural, rigid boards consisting of a glass-fiber-reinforced polyisocyanurate foam core with solid aluminum facers on both sides. The exposed surface of Thermax™ Sheathing and Thermax™ Basic NH is reflective foil, perfect for use in areas such as a laundry room or storage space. Thermax™ White Finish and Thermax White Finish NH features an embossed white acrylic-coated aluminum facer on their exposed surfaces, for a clean, finished wall that is durable and washable.

Thermax™ Brand products can be left exposed to the interior without a thermal barrier in most applications.

Materials Checklist
To install Thermax™ Sheathing, Thermax™ Basic NH, Thermax™ White Finish, and Thermax™ White Finish NH, you will need:

- Utility knife or small handsaw
- Straight edge
- Safety glasses/goggles and gloves
- Ventilation or respiratory protection for application of polyurethane foam sealant
- Measuring tape
- Construction-grade adhesive such as DuPont™ Enerbond™ Professional Foam Adhesive
- Pencil
- Thermax™ Aluminum Foil or white foil tape (for Option 1)
- Mechanical fasteners (optional for Option 1)
- Squeegee or soft paint roller (for Option 1)
- PVC interlock joint closure system (for Option 2)
- Polyurethane-compatible construction-grade caulk/sealant (for Option 2)
- Polyisocyanurate-compatible insulating foam sealant such as DuPont™ Great Stuff™ Pro Gaps & Cracks Polyurethane Foam Sealant

INSTALLATION PROCEDURES

Cutting
Thermax™ Brand insulation products may be cut with a straight edge and utility knife or with a small handsaw. See Figures 1a and 1b.
Installation
Before installing DuPont™ Thermax™ insulation on the interior basement wall, be sure there are no leaks or structural cracks in the wall. Thermax™ Brand products insulate the basement wall; they do not stop water leakage. Thermax™ insulations may be attached directly to the basement wall with construction-grade adhesive or with the PVC interlock joint closure system. Both installation methods offer a quick and easy alternative to using studs, batt insulation and drywall.

Option 1: Adhere Directly to Wall
1. Provide proper ventilation and wear gloves and eye protection.
2. Apply heavy beads (min. bead size 3/8”) of DuPont™ Enerbond™ Professional Foam Adhesive or appropriate construction-grade adhesive to the wall (Figure 2). Note: Follow adhesive manufacturer recommendations for application pressure and cure times for proper adhesion to masonry walls.
3. Press insulation board against the wall and butt board edges tightly together (Figure 3). Apply pressure to board until the adhesive is set. (Optional: Attach mechanical fasteners to the top and bottom of the board to hold it in place until the adhesive has set).
4. For additional insulation value and protection against air infiltration, apply a small bead of DuPont™ Great Stuff™ Pro Gaps & Cracks along board seams. Take care that foam does not get on insulation facer during application. Allow foam to fully cure, then trim excess with a serrated knife.
5. Cover seams between insulation boards with aluminum or white foil tape (Figure 4). Before applying tape, wipe the application area with a damp cloth to remove foam dust. Allow surface to air dry. Use a squeegee or soft paint roller to press the tape firmly to the joint. Cut tape with a knife or scissors. Do not tear tape.

Option 2: PC Interlock Joint Closure
For additional moisture control and a more finished appearance when insulating with Thermax™ White Finish and Thermax™ White Finish NH, use the PVC interlock joint closure system. The PVC interlock joint closure system is composed of a 2” wide PVC base strip that is attached to the wall at vertical joint locations and a top “T” section that snaps into the base, holding the insulation boards to the wall. The top “T” sections are available in sizes to accommodate board thicknesses of 1”, 1.5” and 2”. Select the correct top “T” section size for your application. Both the PVC base strip and top “T” sections are sold in 10’ lengths.
1. Measure and mark vertical lines for the placement of the PVC base strips. Space the PVC base strips for the correct width of the insulation board (Figure 5). Allow 1/8” between the insulation boards to accommodate the width of the PVC base strip.

2. Fasten PVC base strip to concrete or masonry wall every 12” with a pneumatic nailer or equivalent (Figure 6).

3. Provide proper ventilation and wear gloves and eye protection.

4. Apply beads of DuPont™ Enerbond™ or appropriate construction-grade adhesive to the wall every 16” between PVC base strips (Figure 7).

5. Press insulation board firmly into position between the PVC base strips (Figure 8).

6. Apply a continuous bead of construction-grade caulk/sealant along the vertical edges of the insulation boards, then position and press a PVC top “T” section in the PVC base strip until it snaps into place (Figure 9).

7. Figure 10 shows three different options for finishing at corners: butting two panels against one another, using the PVC Clip Strip or using the J-channel edge closure. The method chosen depends on the desired finished look.
Additional Protection Against Air and Moisture

Use DuPont™ Great Stuff™ Pro Gaps & Cracks to seal gaps, cracks and joints as well as to insulate the area between floor joists along the sill plate (Figures 11 and 12). **Note:** Great Stuff Pro™ foam sealant products cannot be removed from Thermax™ Brand Insulation. Use tape or protective film to protect board surface from overspray.

![Figure 14](image4.png)

Utilities Installation

Electrical and plumbing utilities can be easily installed behind or within the insulation board. Cut openings in the back side of the insulation board for electrical boxes and access to plumbing fixtures and other utilities (Figures 13 and 14).

Recommendations for Painting

If desired, Thermax™ Sheathing, Thermax™ Basic NH, Thermax™ White Finish, and Thermax™ White Finish NH may be painted after installation and taping of joints. Visit our website for more specific recommendations to paint Thermax™ insulations.

**NOTICE:** No freedom from any patent owned by DuPont or others is to be inferred. Because use conditions and applicable laws may differ from one location to another and may change with time, Customer is responsible for determining whether products and the information in this document are appropriate for Customer’s use and for ensuring that Customer’s workplace and disposal practices are in compliance with applicable laws and other government enactments. The product shown in this literature may not be available for sale and/or available in all geographies where DuPont is represented. The claims made may not have been approved for use in all countries or regions. DuPont assumes no obligation or liability for the information in this document. References to “DuPont” or the “Company” mean the DuPont legal entity selling the products to Customer unless otherwise expressly noted. NO EXPRESS WARRANTIES ARE GIVEN EXCEPT FOR ANY APPLICABLE WRITTEN WARRANTIES SPECIFICALLY PROVIDED BY DUPONT. ALL IMPLIED WARRANTIES INCLUDING THOSE OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE EXPRESSLY EXCLUDED. The buyer assumes all risks as to the use of the material. Buyer’s exclusive remedy or any claim (including without limitations, negligence, strict liability, or tort) shall be limited to the refund of the purchase price of the material. Failure to strictly adhere to any recommended procedures shall release DuPont Specialty Products USA, LLC or its affiliates, of all liability with respect to the materials or the use thereof.

Thermax™ products should be used only in strict accordance with product application instructions. Thermax™ products, when used in a building containing combustible materials, may contribute to the spread of fire. **CAUTION:** This product is combustible. Protect from high heat sources. A protective barrier or thermal barrier may be required as specified in the appropriate building code. For more information call the DuPont Contact Center at 866-583-2583 or contact your local building inspector. For emergencies contact Chemtrec 800-424-9300, CCN (Contract Number) 7442.

**WARNING:** Rigid foam insulation does not constitute a working walkable surface or qualify as a fall protection product. Building and/or construction practices unrelated to building materials could greatly affect moisture and the potential for mold formation. No material supplier including DuPont can give assurance that mold will not develop in any specific system.
