

DuPont™ CuSolve™ EKC™ 575

Post Etch Residue Remover

Introduction

DuPont™ EKC™ 575 post etch residue remover is an aqueous cleaning solution designed specifically to address TiN metal hard mask pullback *in situ* during cleaning. The product is provided as a concentrate which is activated by the addition of hydrogen peroxide at point of use. Peroxide concentration, process temperature, and process time enable a controlled, selective and tunable removal of TiN metal hard mask *in situ* during the clean process. The product is qualified for 28 nm Dual-Damascene application.

Cleaning Performance

- Complete removal of etch polymer residues
- Complete removal of Ti(x)F(y) residues and Cu oxides
- Compatible with low-k (such as SiOC, k=2.5) and Cu

TiN and Cu Etch Rate vs. H₂O₂ and Temperature

- TiN etch rate increases with H₂O₂ concentration and process temperature
- Cu etch rate increases with H₂O₂ concentration
- The TiN etch rate can be tuned by varying H₂O₂ concentration and process temperatures according to customer requirements

Figure 1. Contour Plot of TiN and Cu Etch Rates

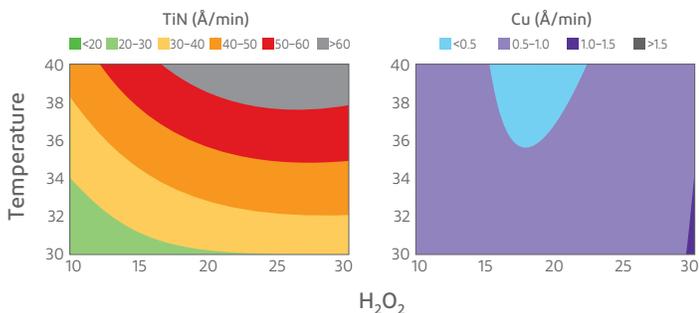

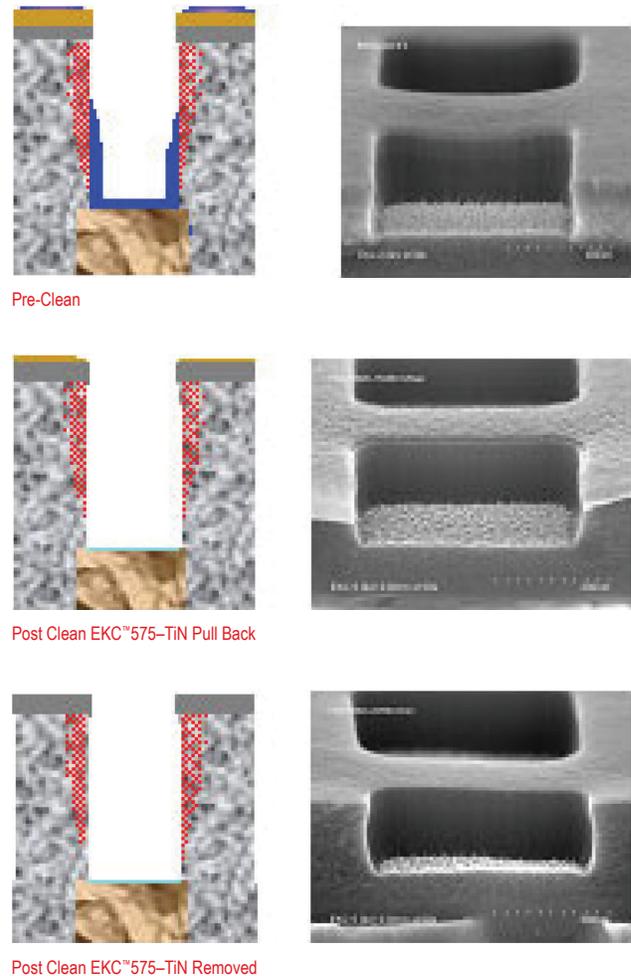

Table 1. Etch Rates for Various Materials

EKC™ 575 + 20% H ₂ O ₂ (30%) at 30 °C			
Cu (Å/min)	TiN (Å/min)	TEOS (Å/min)	BD2 (Å/min)
<2	30 ± 2	0.5 ± 0.3	0.5 ± 0.3

Figure 2. Illustrations of TiN Removal and Cleaning Performance

Single Wafer Process Recommendation

- Mix EKC™575 with 30% hydrogen peroxide (4:1) prior to use (e.g., 7.5 L of 30% peroxide added to 30 L of EKC™575 for a 40 L tank)
- Mix by recirculation through the tool for 20–30 min
- Set process temperature to 25 to 45 °C (optimum 30 °C)
- Process time: 120 sec (range is 60 to 150 sec)
- Flow rate: 1–2 L/min
- TiN: Cu selectivity is governed by pH, peroxide concentration and temperature
- Process time can be readily adjusted to control the level of TiN removal – partial recess
- 30% hydrogen peroxide semiconductor grade is recommended

Material Compatibility

EKC™575 (activated with peroxide) and EKC™575 have been tested at 30 °C and are compatible with PFA, PP, HDPE, PVC, PTFE, PVDF, Kalrez® O-ring, and SS316.

Table 2. Physical and Chemical Properties

Parameter	EKC™575 No Peroxide	EKC™575 With Peroxide	
pH	9.6–10	8.8–9.2	
Flash Point (°C)	NA	NA	
Surface Tension (dynes/cm, 24 °C)	65.1	NA	
Freezing Point (°C)	–11.5	NA	
Density (g/mL)	1.0014 (20 °C)	0.9982 (30 °C)	NA
Absolute Viscosity (cp)	1.10 (20 °C)	0.87 (30 °C)	NA
Kinematic Viscosity (cSt)	1.09 (20 °C)	0.88 (30 °C)	NA

Bathlife and Shelf life

- Typical bathlife is 12 hr when peroxide is added
- Shelf life is one year from date of manufacture

Safety

EKC™575 is a clear liquid with no odor and is non corrosive. Exposure to the eyes causes irritation, and exposure to the skin and respiratory tract may cause irritation. For further information please refer to the MSDS.
