

## **Kevlar® for Protective Motorcycle Apparel**

DuPont™ Kevlar® fibers are used in thread or fabric to reinforce protective motorcycle garments and help provide improved tear and abrasion resistance, so that the rider can enjoy the ride.

Motorcyclists cannot rely on a vehicle to protect them after a crash. Their protection is first to use a defensive riding style, which hopefully allows them to avoid the accident. Then, their protection is based on the quality of their protective apparel.

Defensive riding is enabled by comfortable and properly fitting gloves, jackets and pants, which is why riders choose apparel with textiles. DuPont™ Kevlar® fiber-based reinforcements in gloves, jackets or pants is comfortable and helps allow easy long-term maintenance for a continued good fit.

In the event of a crash, motorcyclists slide over the tarmac where apparel can tear or abrade exposing the skin. Using Kevlar® thread to assemble garments and reinforcing the garments with Kevlar® fiber-based liners or single layer fabrics can give the rider additional protection. Additionally, all products that carry the Built with Kevlar® logo have been tested in accordance with publicly recognized safety standards, for example the norm EN13595:1-2002 and EN 17092-2020.

Our official Licensed Garment Manufacturers for the Kevlar® Motorcycle Apparel Private Label Program are:

**Faaz International, Pakistan**  
<https://faazintl.com/>

**Mir Yousaf, Pakistan**
