Tedlar®

Sunbooster Flexible Solar Modules

Sunbooster's VERTICAL+ flexible solar modules demonstrate DuPont™ Tedlar® PVF as a frontsheet material in a commercial solar application. Designed for lightweight, adaptable installations, these solar modules face continuous environmental stress, including UV radiation, temperature fluctuations, and moisture. The modules require materials that can deliver in demanding outdoor environments.

That's where Tedlar® PVF frontsheet comes in—providing reliable surface protection, enabling flexible design, safeguarding against environmental degradation, and maintaining appearance over time.

Tedlar® is well suited for portable, adaptable solar applications—and is inherently non-PFAS and made without PFAS materials.
