Advancements in small, durable solutions are driving developments in the advanced driver assistance systems (ADAS) industry. Sensors must rapidly evolve to meet rising autonomy levels in vehicles, as well as demand for active safety and driver assistance technologies. Specifically, high-resolution camera solutions are improving as consumers grow more aware of active safety technologies and desire more confidence while driving. Significant upgrades in camera components help satisfy new safety regulations that mandate the use of active safety and driver assistance technologies, such as collision warning systems, automatic emergency braking, and lane departure warnings.

Industry Needs
- Excellent dimensional stability and low warpage
- Outstanding adhesive compatibility to secure component on the windshield for the life of the vehicle
- Superior flow for easy processing of design features, such as snap fits and over-molded inserts
- Improved laser-marking properties
- Resistance to hydrolysis and low fogging

Solutions
DuPont™ Crastin® PBT and DuPont™ Rynite® PET resins offer clear advantages for vehicle manufacturers. Our materials help high-resolution camera windshield brackets stand up to the harshest environments.

We work with manufacturers around the world on their ADAS platforms to deliver solutions that enhance high-resolution camera solutions, with a specific focus on:
- Dimensional stability
- Adhesive compatibility
- Hydrolysis resistance
- Spiral flow
- Laser marking
- Interior emissions and fogging
- Snap fit
About Crastin®
DuPont™ Crastin® is a stiff, tough PBT thermoplastic with superior dimensional properties and stability. Crastin® PBT is the resin of choice for cost-effective, high-performing automotive high-resolution cameras. It’s easy to process, offering manufacturers the advantage of enhanced flow qualities. Specific benefits for manufacturers of high-resolution camera brackets include:

- Extremely low warpage for higher dimensional control
- Hydrolysis resistance for low fogging
- Laser marking grades available
- Adhesive compatibility to secure component to the windshield for the life of the vehicle
- Meets strict requirements for mechanical properties

About Rynite®
Rynite® unites the best properties of reinforced polyethylene terephthalate (PET) with easier processability to produce high-performance parts. This stiff, UV-resistant polymer offers a balance of thermal, mechanical, and chemical properties. Its low warpage (when molded with cold-mold temperatures) is an ideal fit for high-resolution camera brackets.
