The resins employed for boiling water reactor (BWR) purification must be able to purify water to a maximum degree. Any traces of organic and inorganic impurities will become visible in the pure water environment of the reactor circuits. Our IRN-grade ion exchange resins are proven to be the premier resins chosen to protect nuclear power plants throughout the world, able to maintain the purity of the BWR circuit even in extreme temperature conditions.

### Boiling Water Reactor

**Condensate Polisher and Reactor Water Clean Up**

**Product Recommendation**

<tr>
<td>AMBERLITE™ IRN99 H</td>
<td>CPP</td>
<td>AMBERLITE™ IRN99 H Resin is a premium 16% DVB uniform particle size cation resin with very high capacity and oxidative stability. The high oxidative stability reduces reactor water sulfate concentration in BWR condensate polishing. AMBERLITE™ IRN78 OH is a premium high solids uniform particle size anion resin with very high capacity. It is specifically processed to minimize organic chloride content. This pairing offers the highest capacity and lowest sulfate with less-separating characteristics.</td>

</tbody>
</table>

**Key:**
- CPP = Condensate Polishing Plant
- RWCU = Reactor Water Clean Up
- SBA = Strong Base Anion
- SAC = Strong Acid Cation
- MB = Mixed Bed
Powering performance worldwide.

With a large global manufacturing footprint, strong R&D expertise and technical support services and systems, we supply high market volumes with high quality. DuPont partners with you, our customer, to understand unmet needs and develop tailored solutions.
