AMBERLITE™ MB20 H/OH Ion Exchange Resin
Mixture of Gaussian, Gel, Strong Acid Cation and Strong Base Anion Exchange Resins for Industrial Demineralization Applications

**Description**

AMBERLITE™ MB20 H/OH Ion Exchange Resin is an equilibrated, homogeneous mixture of a dark strong acid cation and a clear strong base anion exchange resins. It is fully regenerated, ready-to-use, pre-mixed resin developed for the production of high-purity water in working and mixed bed polishing applications. The pre-mixed resin also allows for faster initial rinse-up prior to service, which minimizes rinse wastewater volume.

AMBERLITE™ MB20 H/OH is most commonly used in service deionization for a full demineralization of water when complete removal of silica and CO₂ is required. In most of the applications, the conductivity of the treated water is much lower than 0.1 μS/cm and the pH is neutral. If necessary, the resin can be regenerated after exhaustion. Both components must be separated by backwashing and regenerated separately.

AMBERLITE™ MB20 H/OH is the reference mixed bed for service deionization. The resin mixture is prepared from high-quality components and the proprietary manufacturing process ensures consistency from batch to batch. This enables the resin to perform in a highly stable manner delivering high-quality treated water consistently in both working and polishing mixed beds. The consistency in quality combined with visible separation of cation and anion resins prior to regeneration make AMBERLITE™ MB20 H/OH a trusted choice for mixed bed pool systems.

**Applications**

- Service deionization
- Working mixed bed on tap water in small installations
- Mixed bed polishing on RO or demineralized water

**System Designs**

- Externally-regenerated mixed beds
- Non-regenerated mixed beds

**Historical Reference**

AMBERLITE™ MB20 H/OH Ion Exchange Resin has previously been sold as AMBERLITE™ MB20 Ion Exchange Resin.

Product Performance

Operating Capacity

The operating capacity of AMBERLITE™ MB20 H/OH Ion Exchange Resin can be estimated using the following formula, which gives an approximate determination of volume of water that can be treated:

\[
BV = \frac{500}{TDS \ (meq/L)} \quad \text{or} \quad \frac{gal}{ft^3} = \frac{187000}{TDS \ (as \ ppm \ CaCO_3)}
\]

where BV (Bed Volume) is the number of liters of a feedwater containing a TDS (Total Dissolved Solids) given in meq/L that can be demineralized with one liter of the resin mixture when run to exhaustion (or US gallons per cubic foot of the resin with TDS as ppm CaCO₃).

Treated Water Quality

AMBERLITE™ MB20 H/OH Ion Exchange Resin provides a high-quality demineralized water with a conductivity < 0.1 µS/cm and neutral pH that will satisfy most of the cartridge and laboratory applications.

Suggested Operating Conditions

<table>
<thead>
<tr>
<th>Temperature Range (H⁺/OH⁻ form) §</th>
<th>5 – 60°C (41 – 140°F)</th>
</tr>
</thead>
<tbody>
<tr>
<td>pH Range</td>

</tr>
</tbody>
</table>

§ Operating mixed beds at elevated temperatures, for example above 60 – 70°C (140 – 158°F), may impact the purity of the loop and resin life. Contact our technical representative for details.

For additional information regarding recommended minimum bed depth, operating conditions, and regeneration conditions for mixed beds (Form No. 177-03705) or separate beds (Form No. 177-03729) in water treatment, please refer to our Tech Facts.
Hydraulic Characteristics

Estimated bed expansion of the cation component (Figure 1a) and of the anion component (Figure 1b) of AMBERLITE™ MB20 H/OH Ion Exchange Resin as a function of backwash flowrate and temperature are shown.

Estimated pressure drop for AMBERLITE™ MB20 H/OH as a function of service flowrate and temperature is shown in Figure 2. These pressure drop expectations are valid at the start of the service run with clean water and a well-classified bed.

**Figure 1a: Backwash Expansion – Cation**

Temperature = 10 – 60°C (50 – 140°F)

**Figure 1b: Backwash Expansion – Anion**

Temperature = 10 – 60°C (50 – 140°F)

**Figure 2: Pressure Drop**

Temperature = 10 – 60°C (50 – 140°F)

Product Stewardship

DuPont has a fundamental concern for all who make, distribute, and use its products, and for the environment in which we live. This concern is the basis for our product stewardship philosophy by which we assess the safety, health, and environmental information on our products and then take appropriate steps to protect employee and public health and our environment. The success of our product stewardship program rests with each and every individual involved with DuPont products—from the initial concept and research, to manufacture, use, sale, disposal, and recycle of each product.
**Customer Notice**

DuPont strongly encourages its customers to review both their manufacturing processes and their applications of DuPont products from the standpoint of human health and environmental quality to ensure that DuPont products are not used in ways for which they are not intended or tested. DuPont personnel are available to answer your questions and to provide reasonable technical support. DuPont product literature, including safety data sheets, should be consulted prior to use of DuPont products. Current safety data sheets are available from DuPont.

Please be aware of the following:

- **WARNING:** Oxidizing agents such as nitric acid attack organic ion exchange resins under certain conditions. This could lead to anything from slight resin degradation to a violent exothermic reaction (explosion). Before using strong oxidizing agents, consult sources knowledgeable in handling such materials.
